

Fitting rear LED lights

After taking out old lights see two holes level with each other inside the cup holders
[shown here](#)

Take the rubber rings from the old lights and fit to new cups.

Push the new cup in place and mark with felt tip,
[like this](#)

and [like this](#)

Drill these marks out using size 5 bit then take these screws from the old lights,

and fit them to the back of the new cups [like this](#)

and screw back into place, [like this](#)

Then onto the centres the lights themselves:
[shown here](#)

You will have to source screws to fit them together as they are not supplied with the lights.

[this shows the centre unit screwed in place](#)

Just on the inner part of the cup there is a lip superglue this and push the lights into place, make sure that the Hella sign is straight up, and that's it the wiring is really easy,

[All lights off](#)

Indicator

Brakes

Side lights

[Reverse](#)

[Fog light](#)

Note that there is no colour showing through these lights as colourless bulbs were used so they all look the same when off in the daytime [like this](#)

Whole job, start to finish, takes about 3hrs
